# SPOA30/SPOA40/SPO40/SPO54
## E And M Series
### (600 Series)
Two Post Surface Mounted Lifts

- **SPOA30 Series** Capacity: 3,100kg (775 kg per arm)
- **SPOA40 Series** Capacity: 4,000kg (1,000kg per arm)
- **SPO40 Series** Capacity: 4,000kg (1,000kg per arm)
- **SPO54 Series** Capacity: 5,400kg (1350kg per arm)

---

**INSTALLER:** Please return this booklet to literature package and give to lift owner/operator.
Only those technicians who have been properly trained in the usage and care of the lift should be allowed to operate the lift.

Local regulations MAY require that the trained operator be at least 18 years of age or be supervised by a trained operator while:

- A. Positioning the vehicle in the service bay
- B. Positioning the lift adapters at the vehicle manufacturer’s recommended lift points
- C. Actuating the lift controls

Display this manual in a conspicuous location in the lift area convenient to the operator.

The lift is to be used for raising unoccupied motor vehicles ONLY!

**ALWAYS** lift the vehicle using all four (4) adapters.
**NEVER** raise just one end, one corner, or one side of the vehicle.

**ONLY** lift vehicles which have an individual axle weight that does not exceed one-half the lift capacity. See load capacity table below.

**OPERATING INSTRUCTIONS**
**SURFACE MOUNTED FRAME ENGAGING LIFTS**

⚠️ **WARNING** To avoid personal injury and/or property damage, permit only trained personnel to operate lift. After reviewing these instructions, get familiar with lift controls by running the lift through a few cycles before loading vehicle on lift.

**IMPORTANT** Always lift the vehicle using all four adapters. **NEVER** raise just one end, one corner, or one side of vehicle.

Assure vehicle frame can support it’s weight & overhead bar or sensor will contact highest point on the vehicle.

1. **Before Loading:**
   - Inspect Lift - See “Operator Inspection And Maintenance” on page 8. Never operate if lift malfunctions or has broken or damaged parts.
   - Lift must be fully lowered and service bay clear of all personnel before the vehicle is positioned onto lift.
   - Swing arms out to full drive-thru position.
   - Assure area around lift is free of tools, debris, grease, and oil.
   - Assure Adapter Pads are free from grease and oil.
   - **Do Not** allow unauthorized persons in shop area while lift is in use.
   - **Do Not** use any part of the lift as a crane or as a support for another lifting mechanism (i.e.: block & tackle, etc.).
   - Turn E-Stop switch to ‘ON’ Position, Fig. 1. For E series lifts turn both E-Stop switches “ON”, Fig. 2.

2. **Loading:**
   - **Do Not** allow unauthorized or untrained persons to position vehicle or operate lift.
   - **Do Not** drive over arms.
   - **Do Not** overload lift. See capacity label on lift.
   - Use Only adapter extenders provided by the manufacturer. **Do Not** use wood, concrete blocks, or other improvised extenders.
   - Spot vehicle over lift with left front wheel in proper spotting dish position, Fig. 3. Position vehicle according to the center of gravity, not for door opening clearance.
   - Check the condition of the pickup points of the vehicle.
   - Swing arms under vehicle and position adapters at vehicle manufacturer’s recommended lift points, Fig. 4. Adjust adapters to the required height to keep the vehicle level and properly balanced.
   - Use optional adapters for under body clearance when required.
   - On SP054 Series Lifts adapters are supplied in 102mm and 204mm increments. Stack-up height should not exceed 306mm. No adapters are supplied with special SP054 Sprinter Lift.
   - Use adapter extension combination to keep lift as level as possible.

3. **To Raise Lift:**
   - **Do Not** permit anyone on lift or inside vehicle when it is being raised or lowered.
   - Maintain visual contact with arms, pickup points, & vehicle throughout the motion of the lift while remaining clear of lift.
   - For M Series Lifts: Actuate RAISE Switch on Control Box to raise lift, Fig. 1.
   - For E Series Lifts: Push 🚪 on control panel, Fig. 2.

**Note:** Allow 2 seconds between motor starts. Failure to comply may cause motor burnout.

- Stop before making contact with vehicle. Check arm restraint pins for engagement. If required, slightly move arm to allow restraint gear and pawl to mesh. **DO NOT** hammer pin down as this will damage the restraint gear teeth.
• Raise vehicle until tires clear the floor.

• Stop and check adapters for secure contact at vehicle manufacturer’s recommended lift points.

• Continue to raise to desired height only if vehicle is stable on lift.

• Lower lift onto safety latches after desired height is reached. (Lift is to be raised high enough for locking latches to engage.)

• For M Series Lifts: Actuate LOWERING VALVE handle to lower lift onto locking latches.

• For E Series Lifts: Actuate control panel to lower lift onto locking latches.

• DO NOT go under vehicle if all four adapters are not in stable contact at vehicle manufacturer’s recommended lift points.

• Repeat complete spotting, loading, and raising procedures if vehicle is unstable.

4. While Using Lift:
• Avoid excessive rocking of vehicle while on lift.

• Always use safety stands as needed for stability when removing or installing heavy components. (i.e.: engines, transmissions, etc.) Use 4 safety stands.

• Raise safety stands to meet vehicle, do not lower vehicle onto stands.

• Avoid accidental touching of exposed exhaust system on raised vehicles. Watch for air hoses and electrical cords which may be tripped over.

• Wear safety glasses while working under vehicle.

5. Before Lowering Lift:
• Remove all tools or other objects from lift area.

• Assure personnel are not in lift area.

6. To Lower Lift:
• Remain clear of lift when lowering vehicle. Keep Feet Clear!

• For M Series Lifts:
  • Actuate RAISE switch to raise lift off locking latches.

  • Actuate SAFETY LATCH RELEASE handle fully and hold.

  • Actuate LOWERING VALVE handle to lower, Fig. 1.

Note: Both LATCH release and LOWERING VALVE handles are deadman-type design. Each must be held down to lower lift. Do not override these self-closing lift controls.

• For E, Series Lifts:
  • Push on control panel to raise lift off of locking latches.

  • Push on control panel to lower lift.

7. Unloading:
• Remove adapters from under vehicle and swing arms to full drive-thru position before moving vehicle.

• Assure Exit area is clear of objects and personnel before removing vehicle from lift.

8. Power Off:
• Turn E-Stop switch to “OFF” position while lift is not in use.
RESIDUAL RISKS

• Check the condition of the pickup points of the vehicle. Assure these points are not weakened due to rust, corrosion, damage, or modification.

• Vehicles with heavy material in the trunk or modified to carry equipment or tools, will have a changed center of gravity. Use stands when working on such vehicles.

• Assure cargo does not cause either individual axle weight to exceed one half lift capacity.
• **Always** keep bolts tight. Check periodically.
• **Always** assure arm stop bolts are in place.
• **Always** keep lift components clean.
• **Always**, if oil leakage is observed, call local service representative.
• **Daily**: Check cables and sheaves for wear. If parts are worn, call local service representative.
• **Daily**: Inspect adapters for damage or excessive wear. If parts are worn, call local service representative.
• **Daily**: Check for permanent deformation to the latches. If present, call local service representative to replace parts.
• **Monthly**: Check equalizer cable tension. If parts are worn, call local service representative.
• **Monthly**: Check overhead sensor for function.
• **Every 3 Months**: Check anchor bolts for tightness. Anchors should be torqued to 200Nm (12.4kg-m).
• **Every 6 months**: Check fluid level of lift power unit and refill to proper level in level indicator with lift fully lowered.
• Replace all decals on the lift if unable to read or missing. Reorder labels from Rotary Lift.
• **Monthly**: Clean and check base of lift. Remove any rust and touch-up with paint.

---

### TROUBLE SHOOTING FOR OPERATORS

REPAIR MAINTENANCE
MAINTENANCE AUTHORIZED BY QUALIFIED SERVICE REPRESENTATIVE ONLY

- **Lockout** all energy sources before beginning any repairs.
- **DO NOT** modify the lift in any manner without the prior written consent of the manufacturer.
- If electrical problems develop, make repairs according to local electrical codes. Use genuine Rotary Lift parts when replacement is necessary.

- **Replace** worn parts as required with Rotary Genuine Parts.
- Adjust equalizer cable tension per lift installation instructions.
- **Monthly**: Lubricate locking latch shafts. Actuate latch handle several times for oil to penetrate joints.

---

ANNUAL INSPECTION
PERFORMED BY AUTHORIZED PERSONNEL ONLY

Aside from the routine checks that are stated under “Operator Maintenance”, the following annual inspection is to be performed and a record of this inspection permanently retained on site. All deficiencies are to be corrected by the proper authorized personnel.

---

INSPECTION POINTS

- Check accessibility of the operating procedures.
- Check accessibility and readability of all labels.
- Check the rated load capacity of the lift.
- Examine all structural components including welds.
- Check electrical cords for insulation damage.
- Check fluid level.
- Check the lift controls for function.
- Check for proper function of swing arm restraints.
- Check all fastening devices for tightness including floor anchor bolts.
- Check exposed surfaces and edges.
- Operate the lift and check the operation of the positive stop and the lift safety latches.
- Check for proper operation of adapters.
- With a representative vehicle on the lift, check the lowering speed (not to exceed 0.15m/s).
- Check the operation of the synchronization or equalization system so that both sides raise and lower equally. Perform check with and without a vehicle representative load.
- Check the function of overhead sensor.
- Check all accessible piping, tubing, hose, valves and fittings. Review lift oil consumption records.
- Operate lift through full excursion and observe. Perform check with and without a vehicle representative load.
- With lift loaded, stop the lift at midpoint of travel and observe for drifting down and hydraulic leaks.
- Check with operator to ascertain any unusual operating characteristics.

<td>3. Latch cable is loose.</td>
<td>3. Replace cable.</td>
</tr>
</tbody>
</table>

*Note: Shim thickness of 51mm is possible by using optional shim kit #FC5393. Contact your authorized Rotary repair person.*
**EQUALIZER CABLE ADJUSTMENT**

**Checking and Adjusting Equalizer Cables:**
Raise lift to check equalizer cable tension. Below carriage, grasp adjacent cables between thumb and forefinger, with about 67N effort you should just pull the cables together. Adjust at upper tie-offs (Fig. 5).

---

**LATCH CABLE ADJUSTMENT FOR M SERIES LIFTS**

**Checking and Adjusting Locking Latch Cable:**
1. Raise carriages past the first latch position and then lower onto latches.
2. Check that the latches have fully engaged when the latch handle is released. Be sure carriage is resting on latch dog.
3. Raise carriages fully off latches, actuate latch handle and check that the latches have fully disengaged.
4. Make necessary adjustments if required, see Fig. 7, recheck latch function. Latch handle must be positioned at the top of the latch control slot, Fig. 8.

Pull Control Plate down, making sure the Latch Dog itself does not move, to eliminate clearance between Control Plate slot and Latch Dog pin (Fig. 6). Loosen clamp and remove slack in the cable. Tighten the clamp.

MANUAL LOWERING OF LIFT
FOR E SERIES LIFTS ONLY

If your lift is in a raised position and you lose power it is important to know how to lower the lift manually. Make sure nothing is under the lifting structure of vehicle and all unauthorized personnel are away from the lift area.

1. Place a hydraulic jack and pipe under the carriage on the master control side. Jack should be rated to lift the capacity of the vehicle.
2. Raise lift off of the locking latch. You should only have to raise lift approximately 1/4" to disengage the lock.

3. Remove access panel from the control panel and pull locking latch back, Fig. 9. If you can not pull it back with your fingers then you don't have the latch off of the lock. Repeat Step 2 until lock is disengaged.
4. Place a flat piece of steel behind latch dog and back of column to keep it off of the lock.
5. Slowly lower hydraulic jack and pipe out from under the arm carriage.
6. Repeat step 1 thru 5 on slave control panel column.
7. The lift is now being held up by hydraulics at this point.

8. Remove cap from lowering valve on power unit and twist and pull to lower lift, Fig. 10. The lift will lower at a slow speed. Replace cap on lowering valve after the lift has been lowered.
9. If your facility lost power your lift will operate when you regain power.
10. If your facility power was not lost, have a certified electrician check wiring to lift or call an authorized Rotary repair person.
